MEHRASL

MANUFACTURING CORPORATION

**C Chiller Catalogue

MEHR ASL Offers you a simple selection method for water cooled liquid chillers. performance, equipment and dimension data, cooler & condenser flow rates and pressure drops, cooling capacities, electrical input power rating and ...

Study the catalogue completely, and do not hesitate to contact us directly on any problem or for more information. In the case of not being successful on selecting and finding your required chiller model that meets your will or own special working and operating conditions perfectly, you would be introduced to our special order service. Contact our head office and attach the complete initial designs technical data, put up your request for discussion with us. Be sure to have the best industrial solution in hand immediately.

We will manufacture your requested system based on advanced technology design and calculation. Then you will really know that you have selected the product with

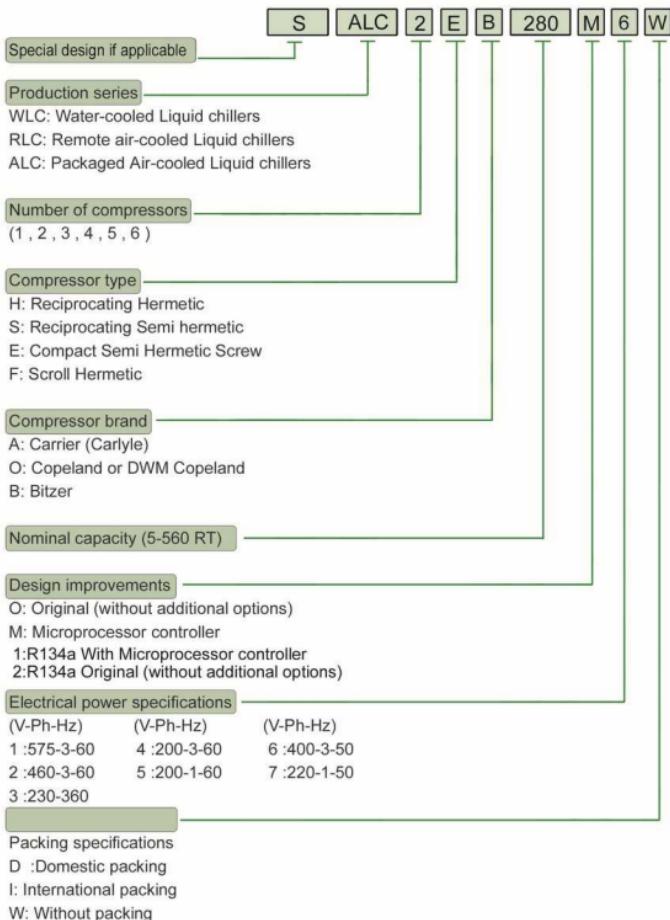

The Best quality money can buy

and the best advisor from

Where the quality is a tradition

مهر اصل در این مجلد روش ساده و آسانی جهت انتخاب چیلر و استخراج ابعاد و اندازه های آن و اطلاعات مورد نیاز دیگر را ارائه داده است. لطفاً این مجلد را به صورت کامل و با دقت طالعه تهدید و در صورت نیاز به اطلاعات بیشتر با **مهر اصل** تماس حاصل فرمائید. در موارد سفارشات خوبه که اطلاعات ارائه شده نیازکار بر را تائین نمی توانید و یا اصول درخواست مشتری برخلاف محصولات ارائه شده در کاتالوگ پاشد، با تماس و ارسال مدارک فنی پیروزه خود به **مهر اصل** مطمئن باشید که در اسرع وقت پاسخ لازم و همچنین راه حل مناسب را دریافت خواهید نمود و اطمینان داشته باشید که محصولات انتخاب شده توسط شما بهترین در نوع خود میباشد.

MODEL KEYWORD

RLC: Remote air-cooled Liquid chillers

ALC: Packaged Air-cooled Liquid chillers

(Special order)

WLC: Water-cooled Liquid chillers

****C series liquid chillers** are compact energy-efficient units designed to use in many commercial and industrial applications like office buildings, apartments, hotels, schools, hospitals, amusement centers, oil refineries, steel mills, food processing plants, petrochemical plants, paper mills and anywhere you need to decrease the temperature of water, alcohol, oil or any other liquids or fluids.

MEHR ASL WLC, ALC series liquid chillers are packaged units complete designed to reduce installation time and costs. These units have been completed with cooler, compressors, condensers, refrigerant and power circuits, controls, refrigerant and oil charges that only need the addition of a condenser water supply, connection to the electrical power and chilled liquid distribution system. For RLC must order air cooled condenser separately.

United Technologies Carrier brand Carlyle, Bitzer and Copeland high performance compressors used in the **C series liquid chillers are matched to MEHR ASL high efficiency heat exchangers. The compressors are mounted on heavy-duty spring or rubber vibration isolators to minimize vibration transmission to the buildings. A crankcase heater that is always on during compressor off cycles protects the system against refrigerant migration and oil dilution and the potentially expensive problems they can cause. Compressor motors are protected against overheating and potential damage by quick sensing elements.

R134a REFRIGERANT:

R134a was the first chlorine free (ODP=0) HFC refrigerant that was tested comprehensively. It is now used world-wide in many refrigeration and air-conditioning units with good results. As well as being used as a pure substance, R134a is also applied as a component of variety.

R134a has similar thermodynamic properties to R12:

Refrigeration capacity, energy requirement, temperature properties and pressure levels are comparable, at least in air-conditioning and medium temperature refrigeration plants. This refrigerant can therefore be used as an alternative for most R12 applications.

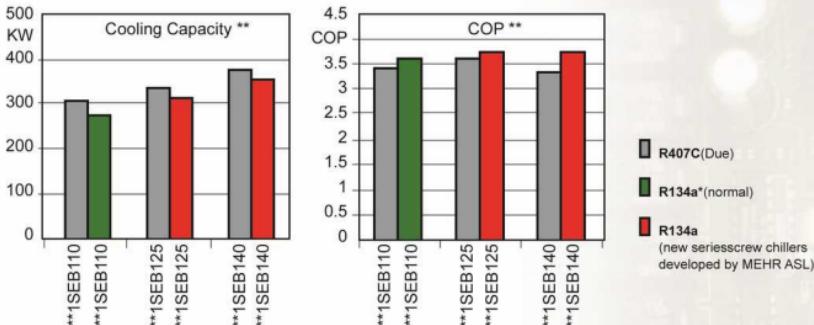

For some application R134a is even preferred as a substitute for R22, an important reason being the limitations to the use of R22 in new plants. However, the lower volumetric refrigeration capacity of R134a requires a larger compressor displacement than with R22. There are also limitations in the application with low evaporating temperatures to be considered.

MEHR ASL Corporation taking advantage of modern technology and compressors for R134a refrigerant offers chillers with almost the same cooling capacity same body size, more displacement and the cost as R22 refrigerant. * The following diagram shows a comparison between the usage of new compressors and R134a with R407c. As it is shown in the diagram, we can achieve a higher COP with R134a in most cases.

NOTE: Refrigerant R134a is also available for customized chillers. Also economizer is optional for chiller with Bitzer screw compressors. Please do not hesitate to contact us for more information.

* Only in chillers equipped with bitzer screw compressors.

Comparison - R134a

** Air Cooled Chiller Application (SST=5 C / SCT=50C / Sh=10K / with ECO)

CONTROL PANEL:

Control panels are designed with the most recent products by Telemecanique, Siemens, for circuit breaker, contactors, relays and best material with warning lights, pressure gages and temperature display.

MEHR ASL Corp. offers two kinds of Mechanical and Digital control circuit for its products. It uses the latest microprocessor control system technology and instruments which are made by the best qualified companies in Europe with its products.

All of products are capable of being designed for microprocessor control system. In such a systems all the pressures such as discharge, suction and oil pressure, also evaporator and condenser temperatures are controlled by pressure and temperature sensors or switches and all the measurement are processed with the main board. All the faults are processed with this board and the whole system is controlled with the main board. The LCD display on the controller lets the user to observe the pressures and temperatures, and enables to control and change the necessary parameters.

With such a boards, there is a option of adding printer, and supervisory (BMS) system. The BMS system which its software is provided by MEHR ASL corp. provides the opportunity for the user to be able to control all of the air conditioning units which are installed in different parts of their working area (This can be as far as the hole country)with a central PC computer via a telephone line and a modem.

Any kinds of function which could be done on the local display system can also be done on the central computer too. In other words, an operator with connecting to any unit can observe all the system parameters, and operate the system remotely. The BMS system provides saving in time and human resource and is suitable for organizations which have several air conditioning systems in various locations.

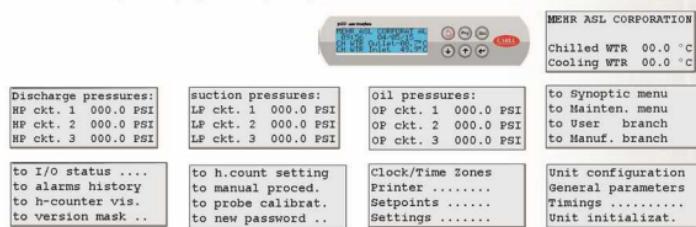

The following shows some windows used in BMS system.

The following shows some of micro controller parameters which are designed for a water cooled chiller with three compressors.

The key board and LCD display provides a user friendly environment for easy control and operation of the system. This system has some advantages over mechanical control system.
a- Controlling the evaporator pumps.

- b- Controlling the condenser pumps and disabling them when they are not needed.
- c- Controlling the cooling tower fans with respect to the cooling tower water temperature.
- d- Controlling the condenser fans (air cooled chiller) with respect to the discharge pressure.
- e- The compressors rotation option.
- f- The pump down option.
- g- The LAN local network capability.
- h- The BMS supervisory system capability.

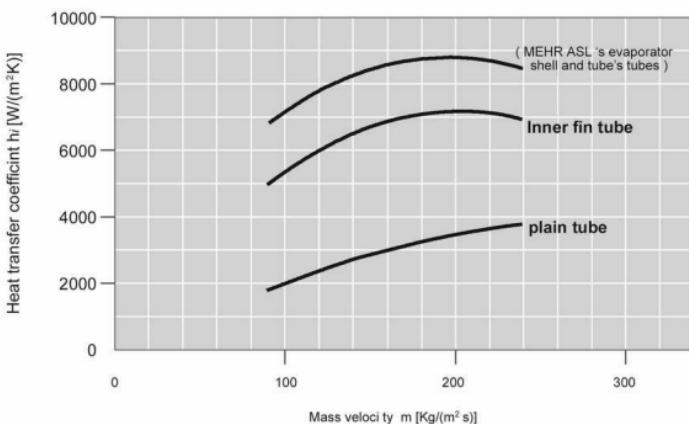

EVAPORATOR :

Evaporator series SETA are used with **C series chillers. Finned copper tubes (Wieland-MEHR ASL) which have a higher heat transfer than smooth tubes are used with this type of evaporators.

Aluminum baffles are used for cross flow of the liquid and higher heat transfer rate. The shell and headers and tube sheets are made of high quality steel with the modern CNC machines. The shell is isolated with special rubber insulator layers for stronger insulation. For more information refer to the shell and tube evaporator catalogue.

The following diagram shows an increase in efficiency of MEHR ASL evaporator shell and tube's tube.

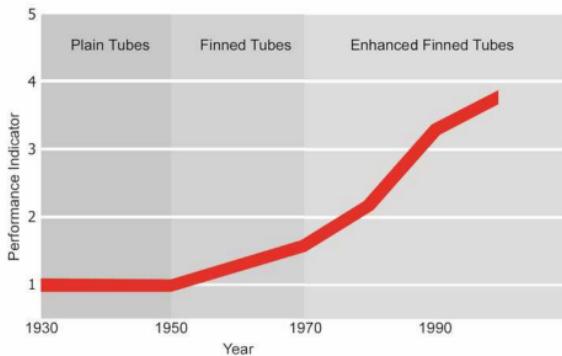

Test conditions Evaporating temperature $T_p = 0^\circ\text{C}$ Vapour quality at inlet 20%
 Refrigerant: R 134a Suction super heat $T_{sup} = 5\text{K}$ Water velocity $W_a = 2.5 \text{ m/s}$

WATER COOLED CONDENSERS :

Water cooled condenser series ASTCA are used with WLC type chillers. Enhanced finned tube manufactured by Wieland - Mehrasl 19 mm in diameter are used with this type of condensers. This type of tube has very high heat transfer than smooth and simple finned tubes.

Customized condenser with stainless steel tubes and sea water coolant are also available. For more information refer to the water cooled condenser catalogue.

AIR COOLED CONDENSERS :

Air cooled condenser series Ac, Av, and Ak are used with chillers of type RLC and ALC. They are designed based on ARI 410-81 standard and MEHRASL laboratory results.

Copper tubes with 3/8" OD size are used with our condensers. The fin arrangements are 14 fin per inch with Staggered geometry of 25 x 19 for aluminum fins and 25 x 12.5 for copper fins. For more information refer to the Air Cooled Condenser Catalogue.

The fans used for condenser units are mostly external rotor types which are made by world's famous producers such as Nicotra, Ziehl-Abegg and ...

PARTS :

All the parts used for assembling such as service valves, expansion valves, sight-glass, liquid valves are provided from world's famous producers such as Danfoss, Alco, Castel, and ...

THE COMPRESSORS USED IN LIQUID CHILLER

The compressors used with our units are provided from the world's famous producers such as Carrier (8 - 40 R-ton), Copeland (5 - 10 R-ton) in two type of hermetic and scroll, Bitzer in two types of semi-hermetic (15 - 70 R-ton) and compact screw (35 - 320 R-ton). The advantage of screw and scroll compressors are lower noise & vibration, higher efficiency and longer working hours than reciprocating compressor. For more information contact with them directly.

- Copland reciprocating hermetic compressor

- Copland Hermetic Scroll compressor

- Bitzer reciprocating Semi - hermetic compressor

- Bitzer compact screw compressor

- Bitzer compact screw compressor

- United Technology Carrier
(Carlyle reciprocating semi-hermetic compressor- Carrier corporation)

SELECTION METHOD FOR CHILLER

There is a simple selection method process for **C series water cooled liquid chillers based on MASS standard units as follows:

Wanted: to have 10 l/s chilled water & 7 °C water outlet temp. & 5.5 °C (~10 °F) temp. drop in cooler. If ambient dry bulb temp. is 35 °C and cooling tower can supply cooling water with 25 °C .which chiller is suitable?

In this catalogue we can find three type of liquid chiller: WLC, ALC, and RLC Lets find suitable chiller for 3 types (of course for RLC, ALC no need for cooling tower)

Cooling capacity= Q (Kw), 10L/s of water ~ 10Kg/s of water

$$Q \text{ (Kw)} = 4.2 \text{ (KJ/kg. °C)} * \text{Water flow (Kg/s)} * \text{Temp. Drop (°C)}$$

$$= 4.2 * 10 * 5.5 = 231 \text{ Kw} = 65.37 \text{ R.T}$$

Attention: 4.2= water specific heat

Assumption: used refrigerant = R22 and fouling factor for condenser < 0.0002 (W/m².K) To find suitable chiller we should calculated condensing temp.

Condensing temp. = Condensing inlet water temp. + A

For firs assumption A=10

$$\text{Condensing temp.} = 25 + 10 = 35 \text{ °C}$$

With refering to capacity tables you can select WLC1EB080 for this chiller used STCAB2080 condenser therefore A=10.8 (refer to pag.30)

$$\text{Condensing temp.} = 25 + 10.8 = 35.8$$

With refering to capacity tables suitable model is **WLC1EB080**

- If you want to use RLC chiller:

You can select a suitable air cooled condenser with refer to air cooled chiller.

- For ALC chiller:

All of our air cooled condenser on ALC models design with 15 °C differential temp.

$$\text{Condensing temp.} = 35 + 15 = 50 \text{ °C}$$

By referring to capacity tables The **ALC2SB090** model is suitable.

NOTE: Capacity of water cooled condenser calculated with fouling factor equal to 0.0002(w/m².k).
For other conditions contact with MEHR ASL.

- COOLING CAPACITIES (R22, R407C)

| MODEL | COND TEMP | COOLING CAPACITY | | IN.P (KW) | | Condenser model for WLC | C.W.F.R Liter/S | C.P.D KPa | |

A= Condensing Temp. - Water inlet Temp.

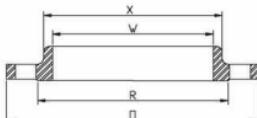

- Condensers linked for chillers with 4 compressor

Attention: The selection method range covers the use of **C series water chillers only, for any other fluids' chilling selection method contact us directly.

DIMENSION OF COOLER FLANGES :

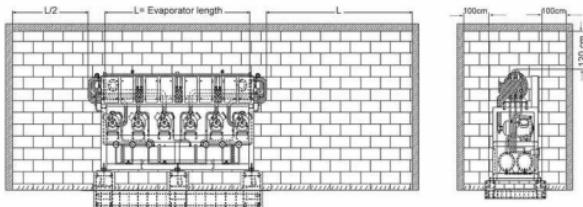

Dimensions of typical commercial steel flanges that are used in coolers' water connections according to ASA B16.5-1960

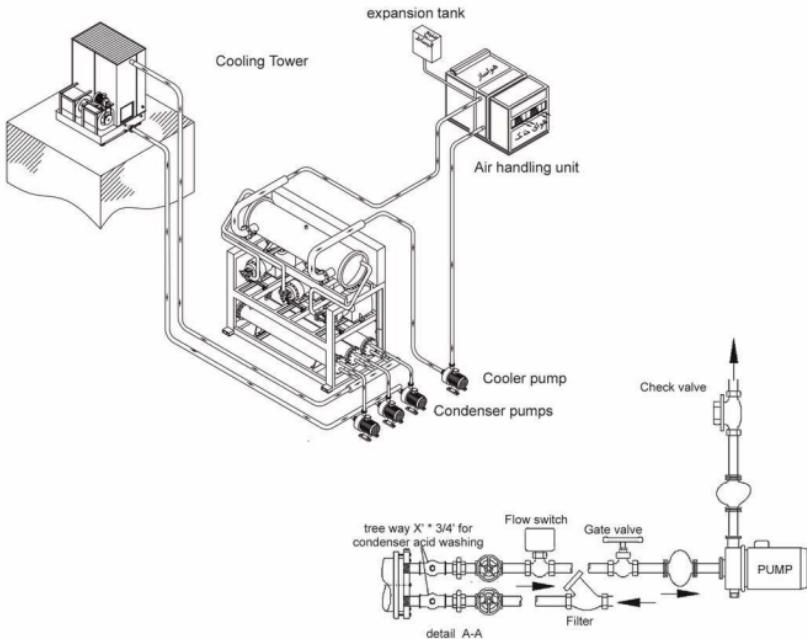

| NOMINAL SIZE [inch] | O [mm] | R [mm] | W [mm] | X [mm] | DIAMETER of BOLTS | NUMBER of BOLTS HOLES |
|--------------------------|-------------|-------------|-------------|-------------|----------------------|--------------------------|
| 2 | 152 | 92 | 62 | 78 | 16 | 4 |
| 3 | 191 | 127 | 91 | 108 | 16 | 4 |
| 4 | 229 | 157 | 116 | 135 | 16 | 8 |
| 5 | 254 | 186 | 144 | 164 | 19 | 8 |
| 6 | 279 | 216 | 171 | 192 | 19 | 8 |

POSITIONING AND PIPING

Minimum distance advisable from the wall:

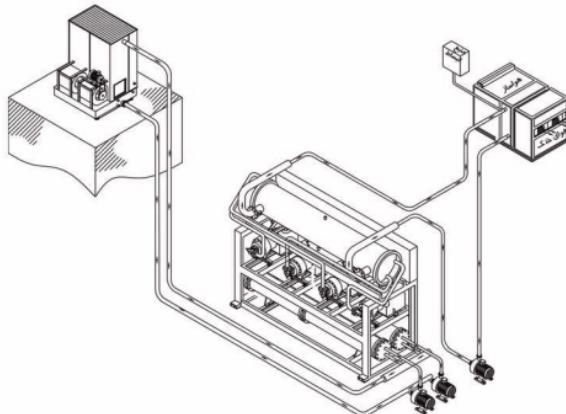

-The service valves shown in this schematic are chosen and installed by the user.

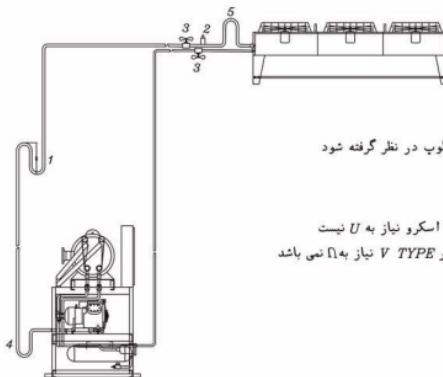

The above piping method is only a general suggestion. For a specific application contact our design Dep.

- WATER COOLED LIQUID CHILLERS INSTALATION (4 COMPRESSORS)

- AIR COOLED LIQUID CHILLERS (RLC) INSTALATION

The above piping method is only a general suggestion. For a specific application contact our design Dep.

Strainer installation at the entrance of all evaporators is a necessity.

All compact air cooled chillers must be installed with more than 70 cm higher than the installation ground.

For maintenance services, compact air cooled chillers need a walking area around the unit.
